

What to expect for 2009?

Tech Talk by Steve Metcalf, Gibson Sound & Vision

2009 is here. What can we expect from home electronics in 2009 and over the years to come? I think back to 1982-83, the Commodore 64 home computer was introduced to the market. This was the best selling computer product of all time. It completely changed the North American lifestyle and paved the way for much of what we have today.

Since then we have developed computer products with stunning progress and the purposes served by computers, now reach into every aspect of daily life.

In today's home entertainment market we have an awful lot happening in terms of these new technologies. We have LCD, Plasma, "Organic LED", blu-ray disc players, digital photography and digital music storage products for sale in our store. All of these new technologies can be easily used in conjunction with computer products. The USA is changing it's television broadcast system to 100% digital in February 2009. Almost all of the major television stations are now available in High definition digital for you to enjoy on your new TV's!

Yes, but what does all this mean? I like to think that we are on the brink of another technological revolution. A time when, just like the early 80's, the way each of us uses our electronics will change forever. Over the last 25 years computer industry folks and consumer electronics manufacturers have battled through countless standards changes, media formats and computer language problems only to arrive now, with a reasonably well sorted out cache of technologies ready to integrate. It has never been easier.

Gibson's has some very exciting products to look forward to for 2009. You wont want to miss out!

*Best wishes to all
and Happy New Year!*
